

New Linglong LXL TRACTION for loaders and dozers offers excellent grip and better self-cleaning

Hannover, Germany, July 23, 2024 – Linglong Specialty Tires’ new LXL TRACTION for loaders and dozers offers excellent all-terrain grip, thanks to its optimized pattern, while its non-directional design simplifies tire installation. The new series anti-stone clamping groove bottom ensures excellent self-cleaning capabilities. In addition its robust shoulder rib offers good sidewall protection, reducing the risk of punctures.

“The new LXL TRACTION is one of our new tire series tyres with a strengthened carcass and improved bead construction,” says Jean-Paul Spijker, Director Sales and Marketing Specialty Tire Europe at Linglong. “We developed the new series with our strong experience in the building and construction sector in mind. The dozer and loader market demands a stronger tire that lasts longer under tough circumstances, but without breaking the bank, as competition in the sector is fierce,” he adds.

The Linglong LXL TRACTION is already fitted ex-factory by machinery manufacturer Liugong in Europe, while also several OEMs fit the tire for the domestic market in China. As of today the LXL TRACTION is also available for the replacement market via the Linglong dealer network.

Another Linglong introduction is the new LXF Master sand tire series. The series’ are optimized for use on sandy and soft ground , thanks to its staggered thread blocks, providing high mobility and heavy load capabilities at low inflation pressures. Originally designed for use on military vehicles, these also offer excellent terrain capabilities for tipper trailers in building and construction or for agricultural use.
